# INTRODUCTION

Week 16 (April 13th to April 19th, 2026), after Easter, is a particularly important time to observe what is a calendar effect and what begins to reflect, more clearly, the real logic of network repositioning. In weeks like this, the market tends to reveal more clearly where prices have been sustained, where adjustments are emerging, and where different formats begin to respond differently to the dynamics of turnover, assortment, and competition.

In this edition, tilapia showed the most evident sign of accommodation after the seasonal peak. Salmon showed a more fragmented behavior between fresh and frozen cuts, suggesting distinct strategies within the same category. Cod, even after the main commercial moment of the semester, still maintains high levels in a significant part of the monitored mix, although there are already occasional adjustments in specific cuts and regions.

# Salmon

With 7,158 samples collected from 431 stores, salmon monitoring maintained a robust base during the week. Salmon entered Week 16 without a clear market direction. Frozen fillets registered a 1.98% increase, while fresh fillets declined by 1.16%. In whole formats, the movement was even more contrasting: frozen whole fillets fell by 6.78%, while fresh whole fillets advanced by 15.43%. More than a market in an up or down phase, what is observed is a redistribution of prices among presentations with different commercial functions within the retail sector.

**Table 1.** Price Indicators – Whole and Filleted Salmon.

| Presentation | Preservation | Current Week Price | P25 -P75 | % Change vs. Previous Week |
|---|---|---|---|---|
| Whole | Frozen | R$54.99 | R$54.99 - R$63.28 | -6.78 |
| | Fresh | R$67.99 | R$61.49 - R$69.99 | 15.43 |
| Fillet | Frozen | R$122.36 | R$111.20 - R$144.88 | 1.98 |
| | Fresh | R$108.72 | R$89.90 - R$189.90 | -1.16 |

This behavior suggests a post-seasonal recalibration environment. Cuts with higher added value and convenience appeal remain relatively supported, while formats more exposed to price sensitivity and competition for turnover show greater fluctuation. Regionally, the main reference indicated a higher median level in the North, at R$ 136.79/kg, and a lower one in the South, at R$ 108.98/kg, reinforcing that, even when the national reading seems moderate, the dispersion between local markets remains relevant.

**Table 2.** Median price and regional variation of salmon fillet.

| Region | Current Week Price | % Change vs. Previous Week |
|---|---|---|
| North | R$136.79 | 0.70 |
| Northeast | R$136.25 | 0 |
| Central-West | R$136.54 | 0 |
| Southeast | R$119.80 | 0 |
| South | R$108.98 | 0 |

# Cod

In the cod market, Week 16 still shows prices at high levels, but without a homogeneous continuation of the upward trend observed around Holy Week. For cod loin, the generic cod fell by 1.73%. For the flattened cod, the highlight is the 10.17% increase in Saithe. Looking at the regional price of generic cod loin, the North maintained the highest median price of the week, while the Central-West registered the sharpest drop, of 10.40%.

**Table 3.** Price Indicators – Cod Loin and Split Cod.

| Presentation | Preservation | Current Week Price | P25 -P75 | % Change vs. Previous Week |
|---|---|---|---|---|
| Loin | Saithe - *Pollachius virens* | R$114.49 | R$ 96.74 - R$ 132.24 | 0 |
| | Cod (Generic) | R$175.80 | R$162.49 - R$192.71 | -1.73 |
| | *Gadus morhua* | R$231.24 | R$231.24 - R$249.88 | 0 |
| | Pacific Cod - *Gadus macrocephalus* | R$279.90 | R$279.90 | 0 |
| Split | Saithe - *Pollachius virens* | R$65.99 | R$58.74 - R$71.99 | 10.17 |
| | Zarbo - *Brosme brosme* | R$79.90 | R$79.90 | 0 |
| | Pacific Cod - *Gadus macrocephalus* | R$84.89 | R$84.89 | 0 |
| | Ling - *Molva molva* | R$99.90 | R$99.90 | 0 |
| | Cod (Generic) | R$129.90 | R$129.90 | 0 |
| | *Gadus morhua* | R$199.90 | R$199.90 | 0 |

**Table 4.** Median price and regional variation by region for cod loin.

| Region | Current Week Price | % Change vs. Previous Week |
|---|---|---|
| North | R$216.50 | 0 |
| Northeast | R$179.78 | 0 |
| Central-West | R$167.90 | -10.40 |
| Southeast | R$174.88 | 0 |
| South | R$185.56 | -0.72 |

# Tilapia

Tilapia was the species that showed the clearest sign of price adjustment this week. Frozen fillets fell by 3.95%, with a central range between R$ 49.16 and R$ 68.74/kg. Frozen breaded fillets remained stable at R$ 81.80/kg. The difference of more than R$ 20/kg between these two presentations continues to indicate that retailers are still assigning different values to products with greater convenience and preparation, while traditional frozen fillets seem more exposed to the competitive pressure of the post-peak period. Regionally, frozen fillet prices showed heterogeneous behavior. The Northeast advanced 2.08%, while the Southeast fell 5.44%. The Central-West, in turn, maintained the highest median level of the week, at R$ 70.20/kg. This pattern shows that, after Easter, tilapia is responding more intensely to regional restocking, promotion, and margin adjustment strategies. Among the species monitored in this edition, it appears to offer the most objective sign of readjustment in the Brazilian retail sector.

**Table 5**. Price Indicators – Tilapia Fillet.

| Presentation | Current Week Price | Minimum and Maximum Prices | % Change vs. Previous Week |
|---|---|---|---|
| Frozen Fillet | R$61.22 | R$49.16 - R$68.74 | -3.95 |
| Breaded Frozen Fillet | R$81.80 | R$66.25 - R$97.25 | 0 |

**Table 6.** Median price and regional variation by region for tilapia fillet.

| Region | Current Week Price | % Change vs. Previous Week |
|---|---|---|
| North | R$63.50 | -2.05 |
| Northeast | R$61.22 | 2.08 |
| Central-West | R$70.20 | 0.32 |
| Southeast | R$61.22 | -5.44 |
| South | R$61.22 | 0 |

**PREPARED BY:**

JUBART DATA

The Week 16 analysis confirms that the post-Easter period does not simply represent an automatic return to stability. On the contrary: it is a period in which retail begins to expose, with greater transparency, its internal differences in strategy, turnover, and positioning. Tilapia already signals a more evident adjustment, salmon reveals a segmented market between presentations, and cod, although still valued, begins to show signs of selective accommodation.

It is precisely in this type of week that granular monitoring becomes more valuable for decision-makers. More than tracking national averages, detailed analysis by species, cut, and region allows identifying where the price is falling, where it remains supported, and where the first signs of competitive repositioning are emerging. This is the central role of JubartData's weekly report: to transform data dispersion into practical market analysis.
