JUBART DATA

Weekly Report

#Week 23

National Fish Observatory

INTRODUCTION

In Week 23, JubartData monitoring indicates the continuation of the selective adjustment phase in the Brazilian seafood retail market. Tilapia maintained the price adjustment level observed in the previous week, salmon showed renewed price recovery in its fresh product categories, and cod remained characterized by substantial dispersion across species, product formats, and regions.

The analysis for the week reinforces that seafood retail prices do not move uniformly. Part of the weekly variation may reflect actual price changes, while another portion is associated with product display, assortment, promotional activities, store composition, and retailers' commercial strategies. Therefore, comparisons with Weeks 20, 21, and 22 are useful for distinguishing recurring market trends from temporary fluctuations.

It is worth noting that throughout May, the price of imported fresh whole Atlantic salmon increased by 5.48%, closing the month at US$8,202 per metric ton. This movement may have contributed to the increase in fresh salmon prices observed in Week 23. In addition, the beginning of the FIFA World Cup and the June Festivities (Festas Juninas) marks a new monitoring period, with potential impacts on product exposure, promotional activities, and consumers' protein choices.

Salmon

Salmon showed a price recovery in its fresh product categories following the correction observed in Week 22. The panel gathered 7,079 samples from 468 stores, representing a 5.37% decline in the number of records and a 0.43% decrease in the number of monitored stores. The median price of frozen salmon fillet remained at R$119.80/kg, maintaining the same level observed since Week 20. Fresh salmon fillet increased to R$109.99/kg, up 10.05% compared with the previous week, while fresh whole salmon rose to R$68.99/kg, an increase of 7.97%. Frozen whole salmon remained stable at R$58.99/kg.

Table 1. Price Indicators – Whole and Filleted Salmon.

Presentation	Preservation	Current Week Price	P25 -P75	% Change vs. Previous Week
Whole	Frozen	R$58.99	R$54.99 - R$68.98	0
	Fresh	R$68.99	R$68.90 - R$69.99	7.97
Fillet	Frozen	R$119.80	R$106.12 - R$143.20	0
	Fresh	R$109.99	R$93.99 - R$189.90	10.05

Comparison with previous weeks reveals two distinct patterns. Frozen salmon fillet has remained stable at R$119.80/kg, suggesting sustained pricing across a significant portion of the retail market. In contrast, fresh salmon fillet has shown greater volatility: prices declined in Weeks 20 and 22, recovered in Week 21, and increased again in Week 23. This pattern suggests adjustments in product assortment, promotional activities, and margin recovery, in addition to the possible influence of import costs.

Salmon once again showed price recovery in specific product categories, although no change was observed for frozen fillets. The increase in fresh salmon prices should be monitored over the coming weeks to determine whether it reflects a more consistent price recovery or merely a temporary fluctuation associated with store mix, promotional strategies, and lower supply intensity. The increase in import prices during May adds an important element to the analysis; however, the pass-through to the Brazilian retail market remains uneven.

At the regional level, the highest median price was observed in the Central-West region, at R$139.98/kg, while the lowest was recorded in the South, at R$106.12/kg. The Northeast posted the largest weekly increase (+7.26%), reinforcing that price transmission continues to be influenced by logistics, consumption patterns, inventory levels, brand positioning, and retailers' commercial strategies.

Table 2. Median price and regional variation of salmon fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R$137.42	0
Northeast	R$131.24	7.26
Central-West	R$139.98	-3.45
Southeast	R$119.80	0
South	R$106.12	0.54

Cod

Cod continued to be the category with the greatest degree of heterogeneity. Monitoring collected 7,667 samples from 435 stores, representing a 4.20% increase in the volume of records and a 0.46% rise in the number of monitored stores.

Table 3. Price Indicators – Cod Loin and Split Cod.

Presentation	Preservation	Current Week Price	P25 -P75	% Change vs. Previous Week
Loin	Saithe - *Pollachius virens*	R$114.49	R$ 96.74 - R$ 132.24	0
	Cod (Generic)	R$181.90	R$165.35 - R$207.46	0
	Gadus morhua	R$231.24	R$224.88 - R$243.74	0
	Pacific Cod - *Gadus macrocephalus*	R$279.00	R$279.00	-0.32
Split	Saithe - *Pollachius virens*	R$72.99	R$59.99 - R$72.99	21.67
	Zarbo - *Brosme brosme*	R$79.90	R$79.90	0
	Ling - *Molva molva*	R$99.90	R$99.90	0
	Cod (Generic)	R$155.33	R$139.00 - R$155.33	0
	Gadus morhua	R$199.90	R$199.90	150.19
	Pacific Cod - Gadus macrocephalus	R$231.75	R$231.75	0

Within the loin category, the highest median price was observed for *Gadus macrocephalus* (Pacific Cod), at R$279.00/kg, with a slight weekly decline of 0.32%. Gadus morhua remained at R$231.24/kg, while generic cod maintained a median price of R$181.90/kg. Saithe also remained stable at R$114.49/kg.

The analysis of loin products indicates price stability among the main products since Week 21. Pacific Cod showed greater fluctuations between Weeks 20 and 22 but remained close to R$279/kg in Week 23. Meanwhile, *Gadus morhua*, generic cod, and Saithe exhibited virtually no variation, reinforcing the relative stability of this product category.

For split cod products (espalmado), price variations were more pronounced. Saithe increased to R$72.99/kg, representing a 21.67% rise. This type of fluctuation requires careful interpretation, as direct week-to-week comparisons may capture not only actual price changes but also shifts in product mix, shelf exposure, and promotional activities at retail outlets.

The cod market remains in a phase of adjustment following the strongest seasonal sales period of the year. Differentiation among *Gadus morhua*, *Gadus macrocephalus*, Saithe, Ling, Zarbo, and generic cod products continues to play a central role in pricing strategy, margin management, and consumer communication. Over the coming weeks, it will be important to monitor whether the greater price dispersion observed in split cod products persists or gradually moderates as product assortments and promotional activities return to more typical patterns.

Table 4. Median price and regional variation by region for cod loin.

Region	Current Week Price	% Change vs. Previous Week
North	R$266.61	-4.18
Northeast	R$175.80	0
Central-West	R$189.90	0.64
Southeast	R$181.90	0
South	R$199.99	0

In the regional analysis of generic cod loin products, the North maintained the highest median price level at R$266.61/kg, despite a weekly decline of 4.18%. The Northeast and Southeast remained within a similar range, between approximately R$176/kg and R$182/kg, while the South and Central-West recorded intermediate price levels.

Tilapia

Tilapia maintained a broad monitoring base in Week 23, with 18,226 samples collected across 468 stores. The number of records remained virtually stable, showing a variation of 0.23%, while the number of monitored stores declined by 0.64%.

The median price of frozen tilapia fillet reached R$64.75/kg, representing a 0.43% increase compared with Week 22. Frozen breaded tilapia fillet remained unchanged at R$85.75/kg. The price difference between the two product categories was R$21.00/kg, maintaining the established positioning gap between the traditional product and the more convenience-oriented option.

Table 5. Price Indicators – Tilapia Fillet.

Presentation	Current Week Price	Minimum and Maximum Prices	% Change vs. Previous Week
Frozen Fillet	R$64.47	R$49.83 - R$69.35	0.43
Breaded Frozen Fillet	R$85.75	R$67.25 - R$97.22	0

Comparison with previous weeks shows that frozen tilapia fillet prices declined from Week 19 to Week 20, stabilized in Week 21, increased in Week 22, and remained at virtually the same level in Week 23. This pattern suggests that tilapia products are beginning to readjust following the end of the Easter-related market effects, although there is still no clear indication of a new, broad-based upward pricing cycle.

At the regional level, the North recorded both the highest median price, at R$79.75/kg, and the largest weekly increase, at 28.11%. The South remained at the lowest price level, with a median of R$59.68/kg. The Central-West and Southeast regions were positioned at intermediate levels, while the Northeast posted a 4.43% increase. This regional variation reinforces the importance of considering market location, retail chain characteristics, and product assortment composition when interpreting price movements.

Table 6. Median price and regional variation by region for tilapia fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R$79.75	28.11
Northeast	R$62.47	4.43
Central-West	R$68.74	-5.32
Southeast	R$64.83	0.12
South	R$59.68	0

Tilapia appears to be consolidating the price recovery observed in Week 22. The stability of breaded products and the maintenance of frozen fillet prices near R$65/kg suggest that retailers may be rebuilding prices and margins following the post-Easter adjustment period. With the FIFA World Cup and the June Festivities underway, the category should be closely monitored both as a protein source for home consumption and as a convenient option within the frozen and processed food segments.

PREPARED BY:

JUBART DATA

Week 23 reinforces that the Brazilian seafood retail market has entered a transitional phase. Fresh salmon prices increased once again, possibly influenced by rising import prices and margin recovery strategies. Tilapia maintained the adjustment level observed in Week 22. Cod, in turn, continued to require a more detailed analysis by species, product format, region, and promotional intensity.

The coming weeks will be particularly important. The beginning of the FIFA World Cup and the June Festivities may influence store traffic, product visibility, competition among protein categories, and the promotional space allocated by retailers. For a more accurate interpretation of market dynamics, it will be necessary to consider not only median prices, but also market coverage, number of stores, product assortment, region, retail chain, brand positioning, and promotional intensity.
