

Weekly Report

#Week 20

National Fish Observatory

INTRODUCTION

In Week 20, JubartData monitoring indicates the continuation of an important price adjustment movement in the Brazilian seafood retail market. Following the period of stronger price pressure associated with Holy Week, some categories continue to adjust, particularly frozen tilapia prices, which declined, and salmon prices, which remained stable.

This week's analysis reinforces the importance of monitoring not only the average price, but also panel coverage, the number of stores monitored, regional price dispersion, and differences between product presentations. In a market with strong variation by region, brand, origin, and product format, weekly monitoring makes it possible to identify signs of opportunity, competitive pressure, and risks of margin loss.

Salmon

With an approximately 15% increase in salmon supply compared to the same period last year, the market showed a week of greater stability in the Brazilian retail sector. The monitoring gathered **7,067 samples** across **461 stores**, with a slight decrease in the number of records and monitored stores. The median price of **frozen fillet** remained at **R\$119.80/kg**, with no weekly variation. **Fresh fillet** reached **R\$89.99/kg**, with a slight decline of **0.41%**. Meanwhile, **whole fresh** salmon showed the main adjustment, with a median price of **R\$62.90/kg** and a weekly decrease of **6.11%**.

Table 1. Price Indicators – Whole and Filleted Salmon.

Presentation	Preservation	Current Week Price	P25 - P75	% Change vs. Previous Week
Whole	Frozen	R\$54.99	R\$54.99 - R\$62.90	0
	Fresh	R\$62.90	R\$62.90 - R\$69.99	-6.11 
Fillet	Frozen	R\$119.98	R\$106.79 - R\$139.98	0
	Fresh	R\$89.99	R\$89.90 - R\$189.90	-0.41 

Despite the stability of frozen fillet prices, the gap between product presentations remains high. Frozen fillet remained **R\$64.81/kg** more expensive than whole frozen salmon, signaling a significant difference in positioning between cuts, product formats, and consumption occasions.

Salmon continues to undergo a price adjustment process, but without widespread declines across the main product presentations. The stability of frozen fillet prices suggests that part of the retail sector is still sustaining prices, while adjustments are occurring more strongly in whole fish presentations.

This behavior aligns with the scenario already monitored by JubartData: the greater global supply, especially in major producing countries such as Norway and Chile, tends to gradually put downward pressure on prices. However, the pass-through to the Brazilian retail market occurs unevenly, conditioned by contracts, inventories, logistics, exchange rates, retail chain strategies, and brand positioning.

In the regional analysis, the highest median price observed was in the **North** region, at **R\$136.79/kg**, while the lowest was in the **South**, at **R\$107.39/kg**. This regional variation indicates that salmon prices remain highly dependent on logistics, consumer profile, product assortment, and the commercial strategy adopted by each retail chain.

Table 2. Median price and regional variation of salmon fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R\$136.79	0
Northeast	R\$129.98	0
Central-West	R\$136.17	1.82 
Southeast	R\$119.80	0
South	R\$107.39	1.20 

Cod showed a more heterogeneous behavior in Week 20. The monitoring gathered **6,769 samples** across **421 stores**, focusing on loin and split cod presentations.

Table 3. Price Indicators – Cod Loin and Split Cod.

Presentation	Preservation	Current Week Price	P25 - P75	% Change vs. Previous Week
Loin	Saithe - <i>Pollachius virens</i>	R\$114.49	R\$ 96.74 - R\$ 132.24	0
	Cod (Generic)	R\$181.90	R\$162.38 - R\$193.62	2.42 
	<i>Gadus morhua</i>	R\$231.24	R\$199.88 - R\$243.74	0
	Pacific Cod - <i>Gadus macrocephalus</i>	R\$249.90	R\$249.90 - R\$274.90	-16.67 
Split	Saithe - <i>Pollachius virens</i>	R\$59.99	R\$59.99 - R\$63.24	0
	Zarbo - <i>Brosme brosme</i>	R\$79.90	R\$79.90	0
	Ling - <i>Molva molva</i>	R\$72.93	R\$65.96 - R\$79.90	-8.72 
	Cod (Generic)	R\$155.33	R\$129.90 - R\$155.33	0
	<i>Gadus morhua</i>	R\$159.90	R\$139.96 - R\$159.90	0

Within the loin category, the highest median price was observed for *Gadus macrocephalus* – Pacific cod, at **R\$249.90/kg**, despite a significant weekly decline of 16.67%. *Gadus morhua* reached **R\$231.24/kg**, remaining stable, while generic cod recorded a median price of **R\$181.90/kg**, with an increase of **2.42%**. Among split cod products, the highest price level was observed for *Gadus morhua*, at **R\$159.90/kg**, with no weekly variation. *Molva molva* Ling showed a decline of **8.72%**, with a median price of **R\$72.93/kg**, while Saithe remained at **R\$59.99/kg**.

Cod continues to undergo a market reorganization phase following the strongest seasonal period of the year. The dispersion across species, product presentations, and regions indicates that the market is not adjusting uniformly. Higher value-added products still maintain elevated price levels, although signs of correction are already emerging in some species and formats.

In the regional analysis of generic cod loin, the highest median price was observed in the **North** region, at **R\$233.33/kg**. The Midwest recorded the highest weekly increase, rising **8.91%**, while the **Northeast** showed a slight decline of **1.12%**.

For retailers, the differentiation between *Gadus morhua*, *Gadus macrocephalus*, Saithe, Ling, and generic products remains central to pricing strategy, margin management, and consumer communication. In categories such as cod, information regarding species, origin, product presentation, and brand directly influences perceived value and the ability to sustain prices.

Table 4. Median price and regional variation by region for cod loin.

Region	Current Week Price	% Change vs. Previous Week
North	R\$233.33	0
Northeast	R\$175.80	-1.12 
Central-West	R\$187.38	8.91 
Southeast	R\$181.24	4.38 
South	R\$185.56	0

Tilapia

Tilapia showed the most significant movement of the week. The monitoring gathered **15,762 samples** across **467 stores**, maintaining a broad observation base. The median price of frozen fillet reached **R\$59.75/kg**, representing a decline of **4.20%** compared to the previous week. The central price range remained between **R\$48.80/kg** and **R\$65.96/kg**, indicating that the decrease was not limited to isolated cases, but rather occurred within the most representative segment of the retail market. Meanwhile, frozen breaded fillet remained practically stable, with a median price of **R\$85.70/kg** and a variation of **-0.12%**.

Table 5. Price Indicators – Tilapia Fillet.

Presentation	Current Week Price	Minimum and Maximum Prices	% Change vs. Previous Week
Frozen Fillet	R\$59.75	R\$48.90 - R\$65.96	-4.20
Breaded Frozen Fillet	R\$85.70	R\$67.25- R\$94.81	-0.12

The price difference between breaded fillet and frozen fillet reached **R\$25.95/kg**, reinforcing the positioning gap between higher convenience/value-added products and the more traditional product presentation.

In the regional analysis, the **South** stood out the most, with the median price of frozen fillet reaching **R\$51.50/kg**, representing a weekly decline of **13.71%**. The **Central-west** maintained the highest price level, at **R\$67.25/kg**, although it also recorded a decrease.

Table 6. Median price and regional variation by region for tilapia fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R\$59.78	-3.97
Northeast	R\$59.98	0
Central-West	R\$67.25	-4.21
Southeast	R\$59.98	-3.83
South	R\$51.50	-13.71

This behavior suggests a more competitive market in certain regions, with possible supply pressure and greater competition from imported products. Through April this year, imports of tilapia fillet from Vietnam had already reached 5,294 tons, with an average CIF import price of US\$4,293/t. São Paulo and Santa Catarina accounted for more than 80% of this volume, with average CIF prices in the year of US\$4,336/t and US\$4,081/t, respectively.

Tilapia remains the main species to be monitored in the short term. The decline in frozen fillet prices, especially in regions facing greater competitive pressure, may be associated with the post-Holy Week adjustment, increased competition for retail shelf space, and the progressive entry of imported products. For distributors, producers, and retail chains, this movement requires close attention to commercial policies, brand positioning, margin protection, and competition between domestic and imported products.

PREPARED BY:

JUBART DATA

Week 20 confirms a scenario of price adjustment in the seafood retail market, although with distinct movements among species. Tilapia showed the clearest sign of decline, especially in frozen fillet products. Salmon remained more stable, although some whole fish presentations are already showing adjustments. Cod, in turn, continues to be marked by strong dispersion across species, cuts, and regions.

An integrated reading of these movements shows that the Brazilian retail market operates in an environment of high information asymmetry. Small variations in supply, origin, product presentation, brand, region, and retail chain commercial strategy can significantly alter the competitive positioning of a product.

This scenario also demonstrates how each retail chain or region values certain brands, species, and product presentations differently. For this reason, weekly price analysis should not be viewed merely as a snapshot of retail conditions, but as a tool for understanding commercial disputes, product repositioning, and shifts in the competitive balance.

This is where continuous monitoring gains strategic relevance. Weekly tracking of prices, coverage, assortment, regions, and product presentations makes it possible to reduce losses, adjust margins, identify commercial opportunities, and improve decision-making in purchasing, sales, and market positioning.

JubartData continues to monitor these movements through the integration of retail pricing, foreign trade, global production, seasonality, and the competitive behavior of retail chains.
