JUBART DATA

Weekly Report

#Week 21

National Fish Observatory

INTRODUCTION

In Week 21, JubartData monitoring indicates a shift in the stabilization trend observed after Easter. Tilapia remained stable in the frozen fillet category, salmon once again showed price recovery in fresh and whole presentations, and cod continued to be characterized by strong dispersion across species, cuts, and regions.

This week's analysis reinforces that retail seafood prices do not move uniformly. The same species may display different behaviors depending on presentation, region, origin, brand, promotional intensity, and retailers' commercial strategies. Therefore, weekly monitoring must combine price data with market coverage, monitored stores, product assortment, and regional analysis.

In an environment marked by high information asymmetry, this integrated assessment makes it possible to identify signs of competitive pressure, repositioning opportunities, risks of margin loss, and significant differences between products that may appear similar at first glance.

Salmon

After a week of greater stability, salmon showed price recovery in part of the monitored presentations. The panel gathered 7,501 samples across 470 stores, with an increase in both the number of records and monitored retailers. The median price of frozen fillet remained stable at R$119.80/kg, with no weekly variation. Fresh fillet prices increased by 22.22%, frozen whole salmon rose by 7.27%, and fresh whole salmon increased by 9.68%.

These price movements in fresh products clearly indicate a shift in strategy among different retail chains in response to the current post-Easter market environment and the end of the seasonal effect on household seafood consumption in retail.

Table 1. Price Indicators – Whole and Filleted Salmon.

Presentation	Preservation	Current Week Price	P25 -P75	% Change vs. Previous Week
Whole	Frozen	R$58.99	R$54.99 - R$68.98	7.27
	Fresh	R$68.99	R$68.99 - R$73.99	9.68
Fillet	Frozen	R$119.80	R$106.79 - R$139.98	0
	Fresh	R$109.99	R$102.94 - R$189.90	22.22

Despite the price recovery observed in fresh and whole presentations, frozen fillet remained stable. The price gap between frozen fillet and frozen whole salmon remained high at R$60.81/kg, reinforcing the difference in positioning between cuts, product formats, and consumption occasions.

Salmon no longer showed only signs of stabilization and began to present price recovery in specific presentations. The stability of frozen fillet suggests sustained pricing in part of the retail market, while the increase in fresh fillet and whole products indicates assortment adjustments, lower promotional intensity, or margin recovery in some regions.

This movement does not change the structural outlook monitored by JubartData: global supply from key producing countries such as Norway and Chile continues to play an important role in the market. However, price transmission to Brazilian retail occurs unevenly, mediated by contracts, inventories, exchange rates, logistics, and brand positioning.

In the regional breakdown for fresh fillet, the highest median price was observed in the Midwest region, at R$139.98/kg, while the lowest was recorded in the South region, at R$105.54/kg. This regional variation shows that price transmission continues to be influenced by logistics, product assortment, inventory levels, consumption profiles, and retailers' commercial strategies.

Table 2. Median price and regional variation of salmon fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R$136.79	0
Northeast	R$124.99	-3.84
Central-West	R$139.98	2.52
Southeast	R$119.80	0
South	R$105.54	-1.72

Cod

Cod continued to show heterogeneous behavior in Week 21. The monitoring panel gathered 7,365 samples across 433 stores, with an 8.80% increase in the volume of records and a 2.85% increase in the number of monitored retailers.

Table 3. Price Indicators – Cod Loin and Split Cod.

Presentation	Preservation	Current Week Price	P25 -P75	% Change vs. Previous Week
Loin	Saithe - *Pollachius virens*	R$114.49	R$ 96.74 - R$ 132.24	0
	Cod (Generic)	R$181.90	R$166.32 - R$199.88	0
	Gadus morhua	R$231.24	R$199.88 - R$243.74	0
	Pacific Cod - *Gadus macrocephalus*	R$279.00	R$279.00 - R$279.45	11.64
Split	Saithe - *Pollachius virens*	R$59.99	R$59,99 - R$66,49	0
	Ling - *Molva molva*	R$59.93	R$39,94 - R$79,90	-17.83
	Zarbo - *Brosme brosme*	R$79.90	R$74,90 - R$79,90	0
	Gadus morhua	R$129.96	R$79,96 - R$159,90	-18.72
	Cod (Generic)	R$155.33	R$139,00 - R$155,33	0
	Pacific Cod - Gadus macrocephalus	R$206.00	R$206.00	-11.11

Within the loin category, the highest median price was observed for *Gadus macrocephalus* – Pacific cod, at R$279.00/kg, with an 11.64% increase during the week. *Gadus morhua* remained stable at R$231.24/kg, while generic cod also showed no weekly variation, remaining at R$181.90/kg.

Among split cod products, the highest price level was also observed for *Gadus macrocephalus* – Pacific cod, at R$206.00/kg, despite a weekly decline of 11.11%. *Gadus morhua* fell to R$129.96/kg, a decrease of 18.72%, while *Molva molva* – Ling declined 17.83%, reaching R$59.93/kg.

In the regional breakdown for generic cod loin, the highest median price was observed in the North region, at R$233.33/kg. The South recorded an increase of 5.06%, while the Midwest advanced 0.70%.

Cod continues to undergo market reorganization following the strongest seasonal period of the year. The dispersion observed across species, cuts, and regions shows that the market remains highly dependent on differentiation in origin, perceived quality, product presentation, and branding.

For retailers, species-level analysis remains essential. Products such as *Gadus morhua, Gadus macrocephalus*, Saithe, Ling, Zarbo, and generic cod occupy very different positions in terms of pricing and perceived value. Clear communication regarding species and product presentation directly influences price sustainability, margins, and consumer response.

Table 4. Median price and regional variation by region for cod loin.

Region	Current Week Price	% Change vs. Previous Week
North	R$233.33	0
Northeast	R$175.80	0
Central-West	R$188.68	0.70
Southeast	R$181.90	0
South	R$194.94	5.06

Tilapia

Tilapia maintained a broad monitoring base in Week 21, with 17,031 samples collected across 469 stores. The number of records increased by 8.05%, while the number of monitored retailers grew by 0.43%.

The median price of frozen fillet remained stable at R$59.75/kg, with no weekly variation. The central price range stayed between R$49.75/kg and R$65.96/kg, indicating stability within the most representative segment of the retail market. Frozen breaded fillet declined to R$83.73/kg, representing a weekly decrease of 2.30%.

Table 5. Price Indicators – Tilapia Fillet.

Presentation	Current Week Price	Minimum and Maximum Prices	% Change vs. Previous Week
Frozen Fillet	R$59.75	R$49,75 - R$65,96	0
Breaded Frozen Fillet	R$83.73	R$66,94 - R$94,75	-2.30

TThe price difference between breaded fillet and frozen fillet reached R$23.98/kg. This gap remains relevant for understanding the positioning of higher-convenience and value-added products compared with traditional presentations. Tilapia interrupted the more pronounced downward movement observed in the previous week and shifted toward stability in frozen fillet prices. At the same time, breaded fillet showed a slight correction, which may indicate adjustments in higher value-added products or temporary changes in promotional activity and product assortment.

Table 6. Median price and regional variation by region for tilapia fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R$64.16	7.32
Northeast	R$59.98	1.04
Central-West	R$67.25	0
Southeast	R$59.75	-0.38
South	R$58.86	14.29

In the regional breakdown for frozen fillet, the Midwest maintained the highest median price level, at R$67.25/kg. Although the South recorded a weekly increase of 14.29%, it still showed the lowest median price, at R$58.86/kg. The North also moved upward, with an increase of 7.32%.

The regional analysis suggests that the market is still not uniformly balanced. The increase observed in the South starts from a previously lower price level, while the Midwest continues to show the highest median prices. For producers, distributors, and retailers, regional monitoring remains essential to assess competitive pressure, pricing strategies, and competition among domestic and imported products, brands, and product formats.

PREPARED BY:

JUBART DATA

Week 21 reveals a seafood retail market that is less homogeneous than what was observed in the previous week. Tilapia stabilized in the frozen fillet category, salmon showed price recovery in fresh and whole presentations, and cod maintained strong dispersion across species, product presentations, and regions.

This behavior reinforces that the market cannot be interpreted solely through overall averages. Differences between fillet and whole fish, fresh and frozen products, identified species and generic products, sales regions, brands, and retail chains directly affect perceived value and the ability to sustain prices.

An integrated reading of these movements highlights the information asymmetry present in the Brazilian seafood retail market. Small differences in origin, presentation, assortment, promotional intensity, and commercial strategy can significantly alter a product's competitive positioning.

For companies involved in production, importation, distribution, and retail, continuous monitoring helps reduce losses, protect margins, identify commercial opportunities, and improve the accuracy of purchasing, sales, and communication decisions.

JubartData continues to monitor these dynamics through the integration of retail pricing, foreign trade, global production, seasonality, and the competitive behavior of retail chains.
