JUBART DATA

Weekly Report

#Week 22

National Fish Observatory

INTRODUCTION

In Week 22, JubartData monitoring shows a fish retail market settling after the Easter period, with more selective movements across species, product formats, and regions. Tilapia recorded another increase in frozen fillet prices, salmon remained stable in the frozen fillet category and resumed price corrections in fresh presentations, while cod continued to exhibit significant price dispersion, particularly in the split (butterflied) presentation.

Comparison with previous weeks indicates that the market does not move in a linear fashion. Some categories experienced a post-seasonal decline and are now showing partial recovery; others remain stable; and some variations appear to reflect changes in product display, assortment, and promotional intensity at retail outlets rather than a structural shift in benchmark prices.

This point is particularly important for cod. The weekly variations observed across specific species and product presentations suggest meaningful changes in retailer merchandising strategies and promotional activities, requiring analysis by store, brand, origin, presentation format, and region. More detailed analyses, including breakdowns by market area and retail chain, can be provided upon request.

Salmon

Salmon showed a week of price correction in its fresh presentations, following the recovery observed in Week 21. The panel compiled 7,481 samples across 470 stores, maintaining a virtually stable sample base compared with the previous week.

The median price of frozen salmon fillets remained at R$119.80/kg, holding the same level observed since Week 19. Fresh fillets declined to R$99.94/kg, representing a 9.13% decrease compared with Week 21, while whole fresh salmon fell 7.38% to R$63.90/kg. Whole frozen salmon remained stable at R$58.99/kg.

Table 1. Price Indicators – Whole and Filleted Salmon.

Presentation	Preservation	Current Week Price	P25 -P75	% Change vs. Previous Week
Whole	Frozen	R$58.99	R$54.99 - R$66.73	0
	Fresh	R$63.90	R$63.90 - R$68.99	-7.38
Fillet	Frozen	R$119.80	R$103.00 - R$139.98	0
	Fresh	R$99.94	R$89.99 - R$189.90	-9.13

The week-to-week comparison reveals two distinct movements. Frozen fillets have remained fixed at R$119.80/kg, suggesting sustained pricing across a significant portion of the retail market. In contrast, fresh fillets have shown greater volatility: prices declined in Weeks 19 and 20, rebounded sharply in Week 21, and fell again in Week 22.

This pattern suggests adjustments in product assortment, promotional activity, and margin management rather than a consistent linear price trend.

In the regional analysis of fresh salmon fillets, the highest median price was recorded in the Central-West region at R$144.98/kg, while the lowest was observed in the South at R$105.54/kg. This regional price gap remains significant and highlights the influence of logistics, consumer demand patterns, inventory levels, brand positioning, and retailers' commercial strategies.

Table 2. Median price and regional variation of salmon fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R$137.42	0.46
Northeast	R$122.36	-2.10
Central-West	R$144.98	3.57
Southeast	R$119.80	0
South	R$105.54	0

Cod

Cod continued to be the category with the greatest price heterogeneity. The monitoring panel compiled 7,358 samples across 433 stores. Compared with Week 21, the sample base remained virtually unchanged; however, price variations by species and product presentation point to significant changes in product exposure and promotional activity at retail outlets.

Table 3. Price Indicators – Cod Loin and Split Cod.

Presentation	Preservation	Current Week Price	P25 -P75	% Change vs. Previous Week
Loin	Saithe - *Pollachius virens*	R$114.49	R$ 96.74 - R$ 132.24	0
	Cod (Generic)	R$181.90	R$168.74 - R$214.93	0
	Gadus morhua	R$231.24	R$224.88 - R$243.74	0
	Pacific Cod - *Gadus macrocephalus*	R$279.90	R$264.90 - R$279.90	0.32
Split	Saithe - *Pollachius virens*	R$59.99	R$59.99 - R$66.49	0
	Zarbo - *Brosme brosme*	R$79.90	R$79.90	0
	Gadus morhua	R$79.90	R$79.90 - R$199.90	-38.52
	Ling - *Molva molva*	R$99.90	R$47.40 - R$99.90	66.69
	Cod (Generic)	R$155.33	R$139.00 - R$155.33	0
	Pacific Cod - Gadus macrocephalus	R$231.75	R$231.75	12.50

Within the loin category, the highest median price was recorded for Gadus macrocephalus (Pacific Cod) at R$279.90/kg, representing a 0.32% weekly increase. Gadus morhua (Atlantic Cod) remained at R$231.24/kg, while generic cod maintained a median price of R$181.90/kg. Saithe also remained stable at R$114.49/kg.

The loin segment indicates relative stability among the main products since Week 21, with the exception of Pacific Cod, which has shown more pronounced fluctuations since Week 19. This variation may reflect changes in the mix of stores and SKUs on display, as well as specific promotional and commercial initiatives.

In the split (butterflied) cod category, price movements were more pronounced. Gadus morhua (Atlantic Cod) declined to R$79.90/kg, while Ling increased to R$99.90/kg following declines in previous weeks. This type of fluctuation reinforces the hypothesis that changes in product exposure, promotional intensity, and assortment composition are influencing retail pricing dynamics.

For this reason, cod price trends require careful interpretation. Direct week-to-week comparisons may capture not only actual price changes but also shifts in the product mix available and observed across retail outlets.

In the regional analysis of generic cod loin, the North recorded the highest median price at R$278.24/kg, representing a 19.25% increase compared with the previous week. The South and Central-West regions remained at intermediate price levels, while the Northeast and Southeast stayed closer to the R$176/kg to R$182/kg range.

These results highlight the significant regional disparities that characterize the cod market, reflecting differences in logistics, product availability, retailer assortment strategies, and local market conditions.

Table 4. Median price and regional variation by region for cod loin.

Region	Current Week Price	% Change vs. Previous Week
North	R$278.24	19.25
Northeast	R$175.80	0
Central-West	R$188.68	0
Southeast	R$181.90	0
South	R$199.99	2.59

Tilapia

Tilapia once again recorded a price increase in the frozen fillet category following the stability observed in Week 21. The monitoring panel compiled 18,184 samples across 471 stores, with a 6.77% increase in the number of records and a 20.00% rise in the median assortment per store.

The median price of frozen tilapia fillets increased to R$64.47/kg, representing a 7.90% gain compared with Week 21. Frozen breaded tilapia fillets also advanced, reaching R$85.75/kg, up 2.41% over the same period. The price gap between breaded and standard frozen fillets reached R$21.28/kg, a significant difference that helps illustrate the market positioning of products offering greater convenience and added value.

Table 5. Price Indicators – Tilapia Fillet.

Presentation	Current Week Price	Minimum and Maximum Prices	% Change vs. Previous Week
Frozen Fillet	R$64.47	R$49,75 - R$68,72	7.90
Breaded Frozen Fillet	R$85.75	R$66,75 - R$97,25	2.41

Comparison with previous weeks shows that frozen fillet prices declined from Week 19 to Week 20, stabilized in Week 21, and increased again in Week 22. This pattern suggests that tilapia products may be beginning to readjust following the end of the Easter-driven market effects. The coming weeks will be important to determine whether this increase reflects a broader recovery in prices and margins or simply a temporary fluctuation associated with changes in assortment and promotional activity.

Table 6. Median price and regional variation by region for tilapia fillet.

Region	Current Week Price	% Change vs. Previous Week
North	R$62.25	-2.97
Northeast	R$59.82	-0.27
Central-West	R$72.60	7.96
Southeast	R$64.75	8.37
South	R$59.68	1.39

From a regional perspective, the Central-West recorded the highest median price at R$72.60/kg, representing a 7.96% increase over the previous week. The Southeast also advanced, reaching a median price of R$64.75/kg, up 8.37%. Meanwhile, the North and Northeast posted slight declines, while the South remained among the lowest-priced regions, with a median of R$59.68/kg.

PREPARED BY:

JUBART DATA

Week 22 reinforces that the Brazilian seafood retail market has entered a phase of selective stabilization following the Easter period. Tilapia is showing signs of price readjustment, salmon remains stable in the frozen fillet category while exhibiting greater volatility in fresh presentations, and cod continues to be the most complex category to interpret, with variations influenced by species, product format, promotional activity, and in-store exposure.

The comparison across Weeks 19, 20, 21, and 22 makes it clear that aggregate averages alone are insufficient to explain market dynamics. Prices, market coverage, product assortment, region, origin, species, brand, and retailers' commercial strategies all significantly influence the competitive positioning of each product category.

In categories such as cod, weekly changes may reflect shifts in product mix and promotional intensity rather than direct price adjustments alone. For tilapia, the recent upward movement suggests the beginning of a post-Easter price recovery, although additional weeks of monitoring will be needed to confirm whether this represents a sustained trend.

An integrated analysis of these movements highlights the information asymmetry that characterizes the Brazilian seafood retail market. For companies involved in production, importing, distribution, and retail, continuous market monitoring helps reduce losses, protect margins, identify commercial opportunities, and improve the accuracy of purchasing, pricing, sales, and communication decisions.

JubartData will continue to monitor these developments through the integration of retail pricing data, international trade flows, global production trends, seasonality, and the competitive behavior of retail chains.
